INTRODUCTION

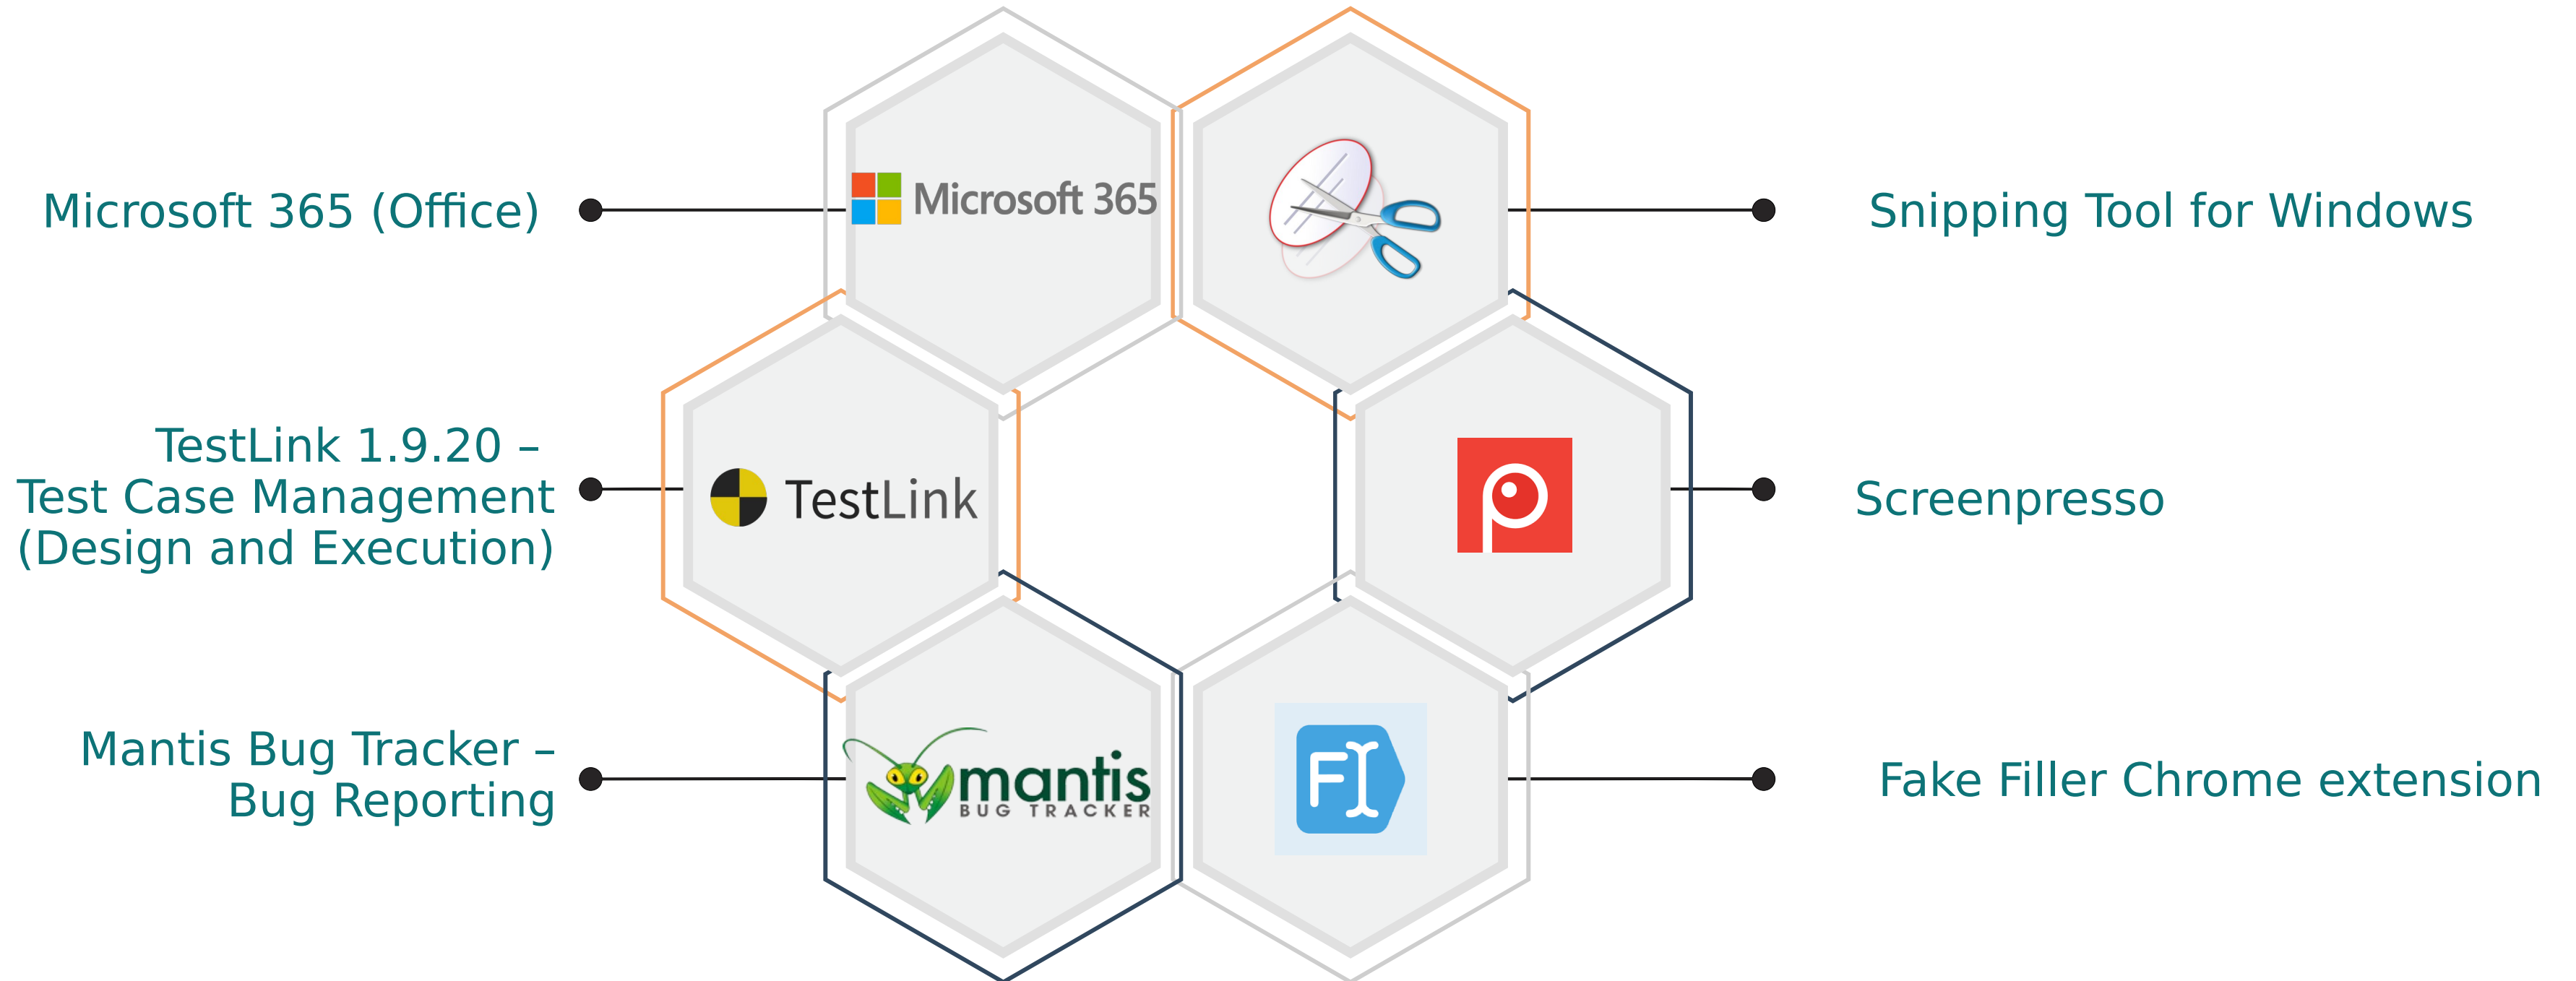

- Monamiagro.ro:
- Software Application
 - E-commerce Website
 - National retailer – provides a wide range of phytosanitary products, fertilizers, tools and equipment for solariums, green spaces, irrigation systems and gardening

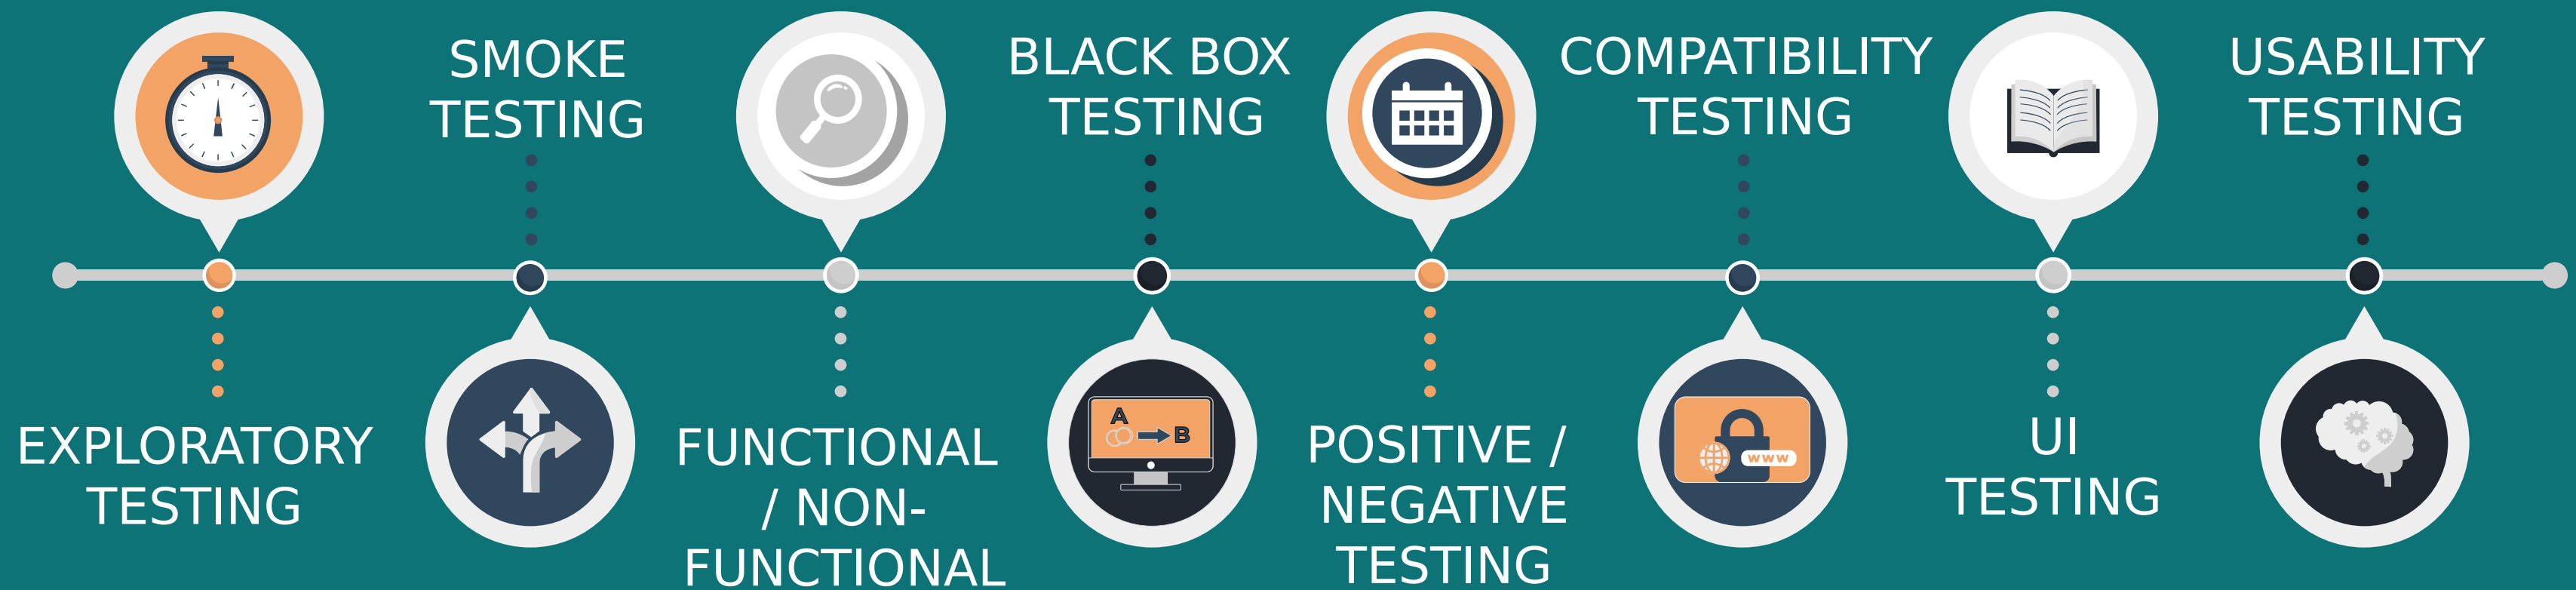

TESTING APPROACH

TESTING TOOLS

TESTING TYPES USED

TESTING LEVELS

Component Testing

Indiv. testing of features: Login, Shopping Cart – largest share

Integration Testing

Simultaneous testing of minimum 2 components

System Testing

All internal components – end to end flows

System Integration Testing

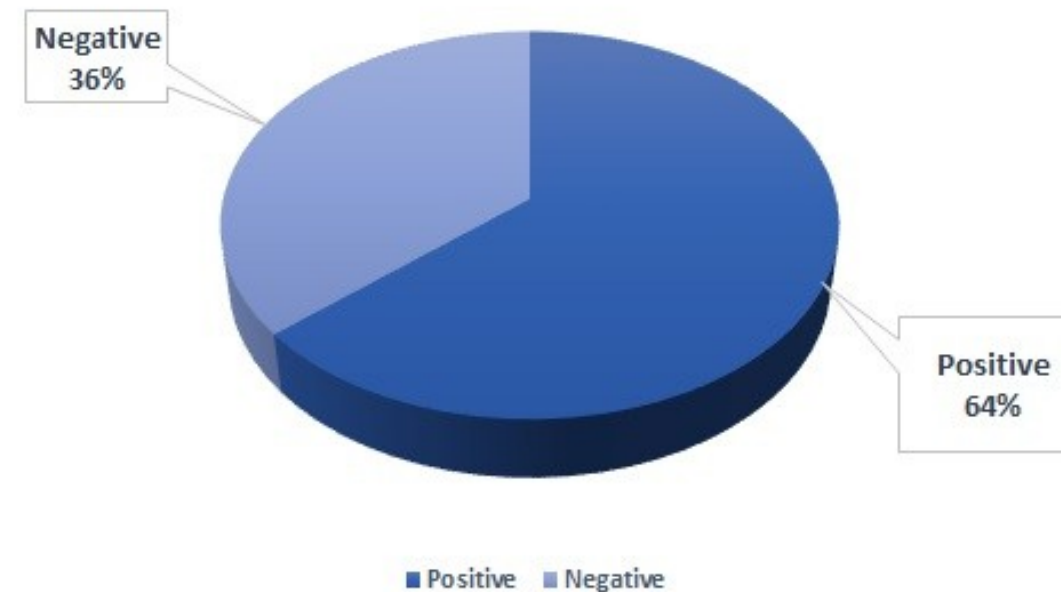

External payment system

TEST CASES OVERVIEW

The executed tests can be included into Functional and Non-Functional types of testing. A number of **73 test cases** are checking the functionalities of the software system; the remaining **7 test cases** are testing the non-functional aspects: compatibility, usability, security.

Smoke suite includes **8 test cases** which were executed, representing 10 % of the total number of test cases and having a pass rate of 100 %.

Positive vs Negative testing

Functional vs Non-Functional testing

TEST CASES OVERVIEW

Test Cases Result per Feature

Smoke Testing

TEST CASES OVERVIEW

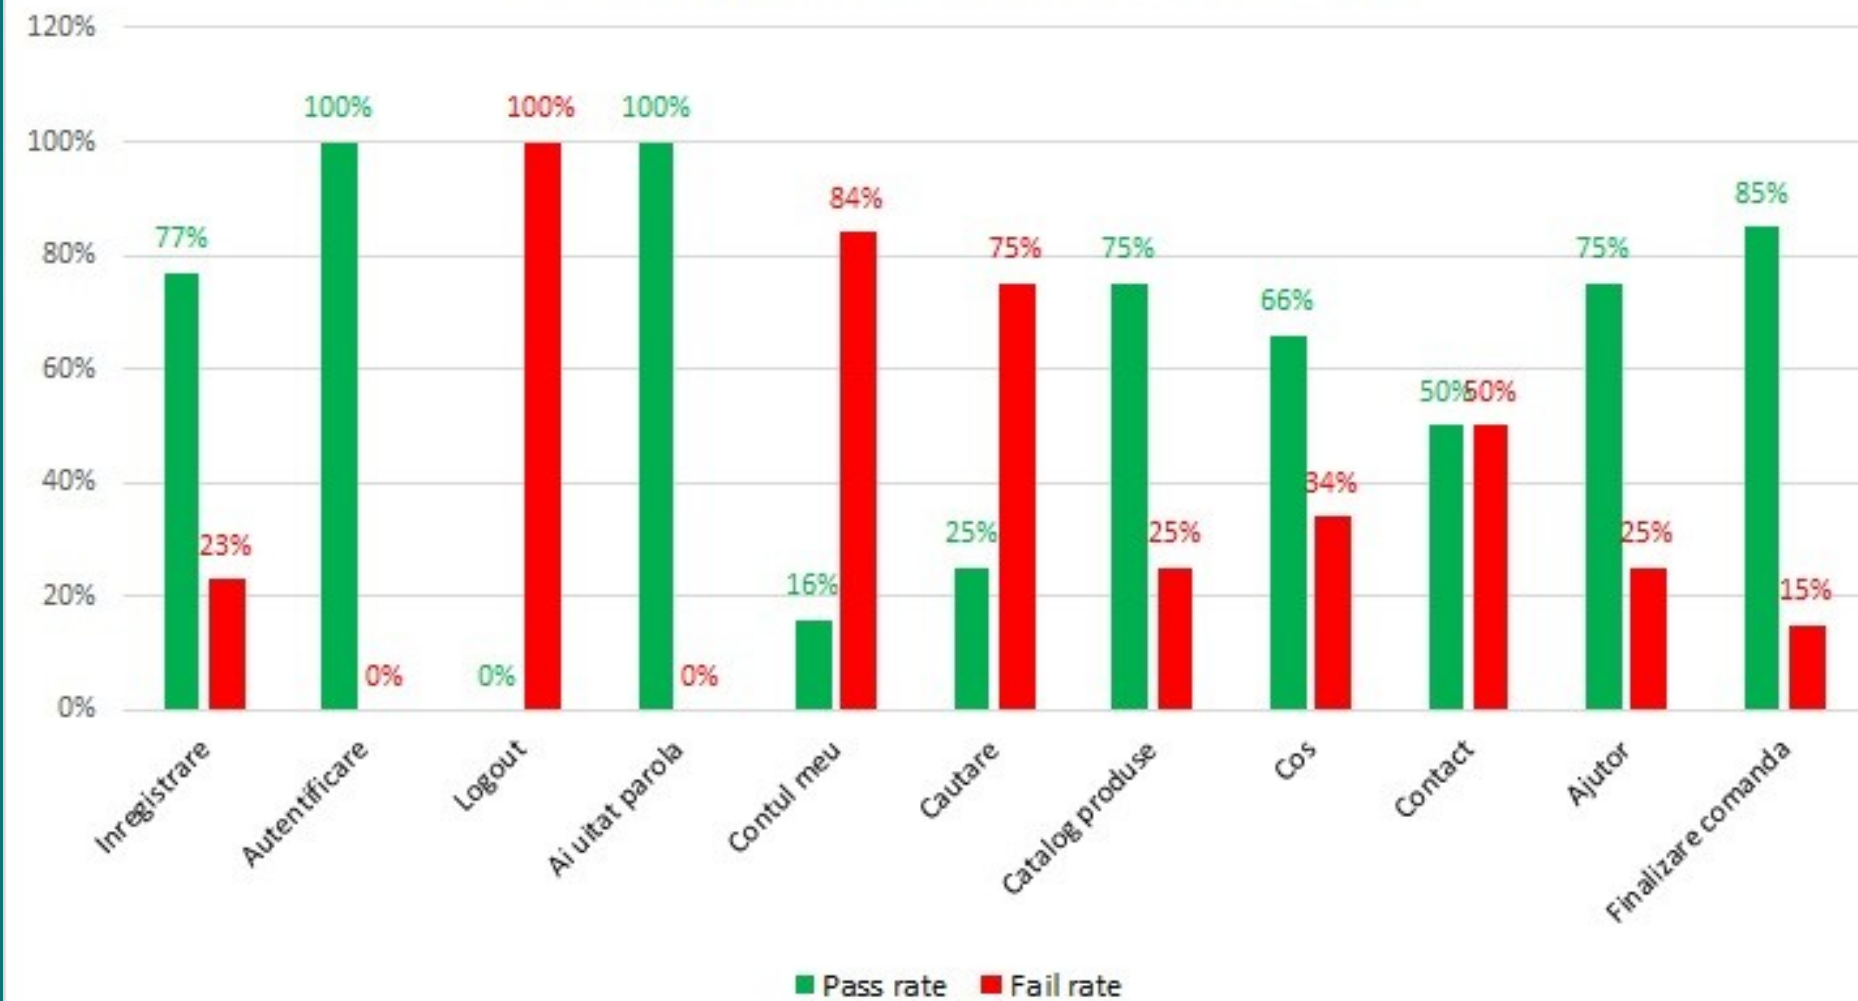

TEST CASES RESULTS

Test metrics per feature/functionality

Test rate per feature/functionality

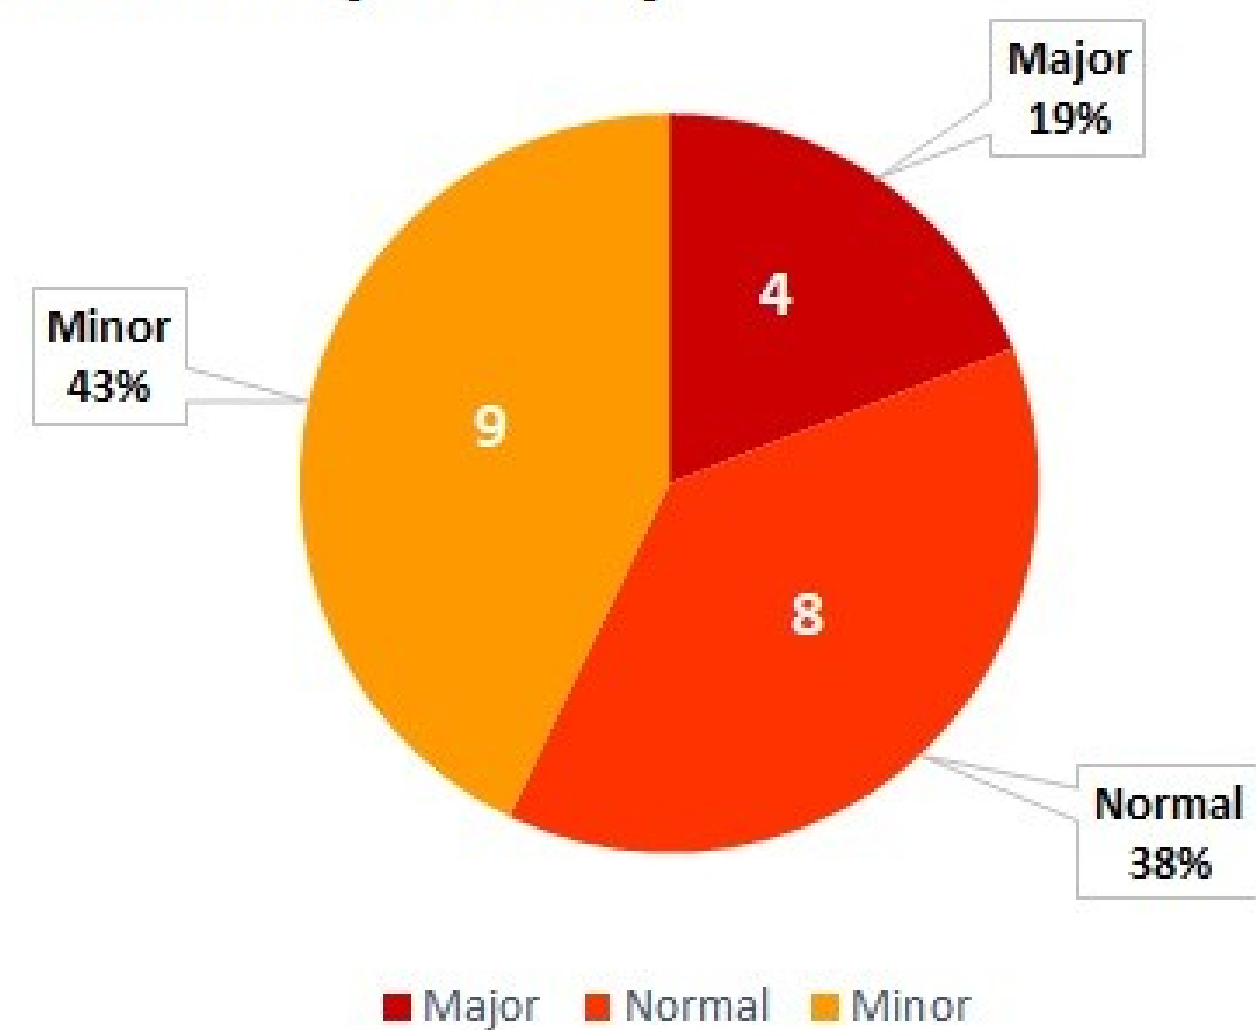

A total of **88 test cases** have been designed for this session and 88 (100%) - all of them were executed: **62 test cases passed** and **26 test cases failed**. "Cos" feature has been identified as the section with the highest number of bugs identified during testing (6). The severity of these bugs is from major to minor.

BUGS OVERVIEW

BUG metrics per functionality

BUG metrics by severity

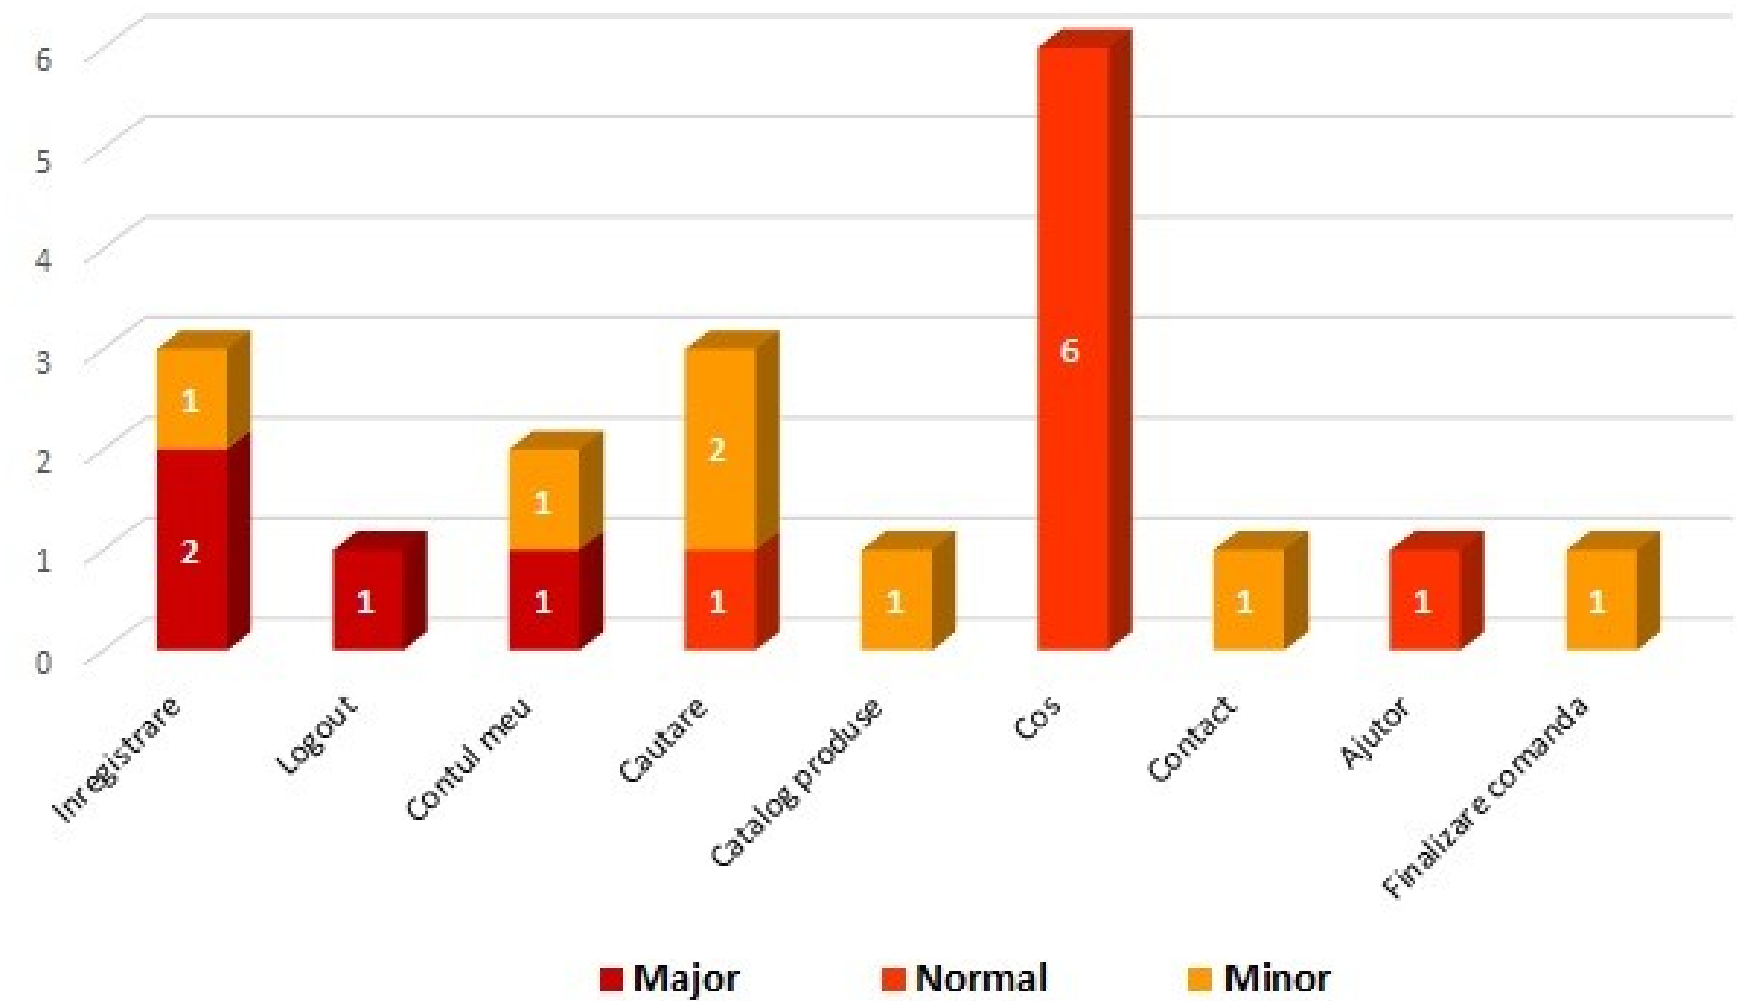

A total number of **21 Bugs** were identified: 4 major, 8 normal and 9 minor severity affecting **26 test cases**. There were **18 defects** and **3 Improvements** logged into Mantis Bug Tracker. Most of the bugs were identified by performing Exploratory Testing and Negative Testing, in "Cos", "Cautare" and "Inregistrare" functionalities.

BUGS OVERVIEW

Nr of Bugs / severity

BUG severity per functionality

Conclusions

A total of **88 Test Cases** were executed,
62 passed and **26 failed**

21 Bugs identified: 4 major, 8 normal and 9 minor, affecting 26 test cases. Most of the bugs were identified performing Exploratory Testing and Negative Testing, in “Cos”, “Cautare” and “Inregistrare” functionalities.

The system has a significant number of issues, that affect various areas, including **registration, shopping cart, my account** and **search** option.

The issues and the **lack of validation** for input fields could lead to incorrect data being inputted into the system database or the system not working as intended.

UI/UX elements are not properly developed - warning messages misspelled, the lack of information, pages or buttons.

Shopping cart Bugs, such as incorrect item quantities, pricing discrepancies, or inability to empty or update shopping cart, can discourage users from completing purchases.

From the user's perspective, the website can be used for its intended purpose - user is able to create account, login, navigate the website, search for products, add them to cart and place an order.

Identified bugs demonstrate that the website needs improvements to make it more accessible and user-friendly.

Lessons learned

Always start with a plan!

Follow the main deadlines as much as possible to avoid delays

Write simple steps for designing test cases / reporting bugs and listen to the team manager directions

It was very helpful to stay in touch with the team, learning from their experience, sharing ideas and helping to overcome a deadlock

Double check as much as possible

The testing session helped me learn better time management, better organizing and better focusing on details and correlating data. I improved my testing skills and staying focused for a higher purpose.

The image features a solid teal background. In the center is a white hexagon with a thick teal border. The words "THANK YOU!" are written in a dark grey, sans-serif font inside the hexagon. The text is arranged in two lines: "THANK" on the top line and "YOU!" on the bottom line. There are also some grey geometric shapes in the corners of the image, specifically triangles pointing towards the center.

THANK
YOU!
